

Assignment (based on CSE 1203) 2024 Series

Instructions:

- i) It an individual assignment*
- ii) Write Code in Java*
- iii) Submit it before the last class of this semester*
- iv) Ensure that all work is original.*
- v) Naming the File: Use a clear and descriptive filename, such as
Assignment_<Roll>_CSE1203.java*
- vi) Submit your assignment in printed form as well as in Google classroom*
- vii) Cover Page: Include your name, student ID, course title, assignment title, and submission date.*

A train tracker is a digital service or application that provides real-time geographic location, speed, arrival times, and delay information for trains, often using GPS/GPRS data. It helps commuters view train movement on maps, check schedules, and receive alerts to manage travel efficiently.

Write a Java Program that accepts the name/number of a train and displays its current location-based information.

-

- When user select the train from drop down list, its current position with related information are displayed at the right side of the frame. The progress bar shows the number of stops of the particular train. The green stops means it already travelled and red stops means it yet to travel. The yellow line means the distance already travelled.

- c) Create at least two classes **Train** and **Station**. For the object of these classes follow the actual train information from Bangladesh Railway website. Use Abstract class and Interface if required.
- d) Assume distances between intermediate stations.
- e) Display message for train Off day
- f) Save all information permanently.
- g) Extract time and day from the system.
